July 7, 2022

Good Morning Lisa,

I will be on line for the meeting today but thought I'd send you some of my thoughts in case I am unable to get them down during the meeting.

Regarding action item #9, GGA Boundary Adjustment:

Would this action mean that the GGA would be letting us out of the basin designation altogether **OR** just out of the locally run Subbasin?

On the maps of the "Overlay of wells from Glenn County database" regarding the map on page 159. There are two wells # 1 & #2 that are shown as irrigation wells.

Regarding Well #1. Having filled in with sand the well depth is now at 309'. This well only had a solar pump installed with at the maximum only produces 7 gpm. With a 5" casing this can in no way be considered an irrigation well. It is used for stock water **ONLY!** The type of this well should be changed to **DOMESTIC**.

Regarding Well #2 This well was drilled in November 2017, replacing an older well that had gone dry. We installed a 6" casing. A 2 HP pump was installed March 2018. This well supplies water to three houses and is in no way connected to any type of irrigation - unless you consider watering the Tomatoes irrigation. The type of this well should be changed to **DOMESTIC**.

As additional note I have NO irrigation wells on the property only wells that are used for people or livestock.

Thank You.
